E. SESSION SUMMARY:

One area of the site has square hard concrete or slabs of hard rock. This area is man made. This area is very large and spacious and this large square is divided up in parts. It seemed as though it was warm at the site. Some people at the site work and some people at the site watch what is going on and some people are here to help prepare for what is going to happen. The people that work at the site wear some type of special clothing. The people that watch what is going on dress casually. Small circular objects are associated with the site and there is a "swing" motion associated at the site. A "socket" and an "opening" is at the site. Some vehicles are here. Rewards or awards can be here and victories are here.

CPYRGHT

Solar cells work. They were developed to help power the United States' space program and have performed impressively. Last year in California they powered the maiden flight of the "Gossamer Penguin" (*facing page*), the world's first piloted solar airplane. ↓
